Apollo Accommodation Reservation, Event Booking and Rentals System

This plugin documentation covers the main areas of operations

- Accommodation and Reservation Calendar Bookings
- Event and Course Calendar Bookings
- Appointment Bookings
- Enhanced Standard Rental Bookings
- Rental Calendar Bookings

Note: Depending on which options are purchased for the plugin only some of the sections will be relevant.

For each option there is a relevant product configuration required.

Background

The products this plugin supports are all similar to standard nopCommerce products for basic configuration.

The main difference is there is a separate table of information which is setup to determine when accommodation, booking event, appointment or rental product is available to be booked. This basic definition for the booking unit is called an availability.

When a booking is made an Order is created and the associated availability is in turn linked to an order item. This order is called an accommodation order reservation, event booking or rental booking.

Vendor Support

The plugin supports vendors and allows vendors to maintain their own products and settings

Defining Products

Accommodation Products

For accommodation products there are several ways an accommodation facility, hotel or B'n'B can be organised into products. Grouped products are used to define a single accommodation facility or booking regime. Single products are used to define individual rooms or units that are linked to the main facility. Any number of rooms can be linked or defined as part of the facility.

Accommodation Option Products

Accommodation Option Products are similar to standard Accommodation Products except they can be searched by Accommodation Room Type (Refer to the Configuration Section)

Booking Event Products

An event has a group product and each booking unit delineator can be a function room, time of day or event type is entered as an associated product that is linked to the main event group product.

Appointment Products

An appointment product has a group product and each appointment booking unit delineator is entered as an associated product that is linked to the main appointment group product.

Rental Products

A rental product has a group product and each rental booking unit delineator is entered as an associated product that is linked to the main appointment group product.

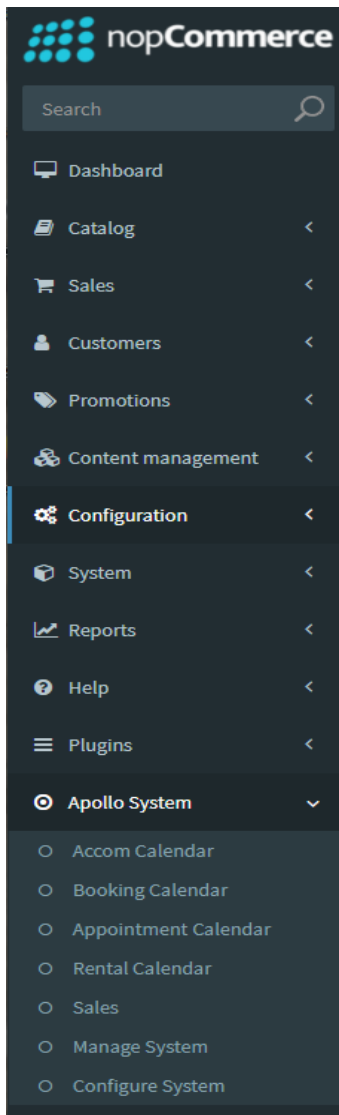

Rental Calendar Products

A rental calendar product has a group product and each rental booking unit delineator is entered as an associated product that is linked to the main appointment group product. This type of product uses the calendar to select rental date rather than the date selector used by the other rental products.

Menu Options and Access Control

Menu Options

A new Plugin menu is added as part of the Installation. Under this menu option there are 7 new functions

Accom Calendar – Accommodation Management Calendar

Displays the Calendar which allows the creation and management of accommodation availabilities displayed in the Store View Calendar

Events Calendar – Booking Management Calendar

Displays the Calendar which allows the creation and management of booking availabilities displayed in the Store View Calendar

Appointments Calendar – Appointment Calendar

Displays the Calendar which allows the creation and management of appointment availabilities displayed in the Store View Calendar

Rental Calendar – Rental Management Calendar

Displays the Calendar which allows the creation and management of rental availabilities displayed in the Store View Calendar

Sales – Accommodation Sales Page displays accommodation orders which are pending and completed with Links to PDF Report and Excel Export

Manage System – Allows you to manage the Configuration of All Apollo Products and the Settings for Appointment Products

Configure – Allows you to manage the settings for the plugin

Note: Access Control to Configure is via the Standard Manage Plugins ACL.

Depending on which modules have been purchased and which Options have been configured then only the menu items configured in the associated setup in configuration will be displayed

Access Control

Before you can access the menu options:

- you need to setup access control to manage access to the Apollo management functions.
 - To **Operate** the Plugin you need Admin area. Apollo Operate System
 - To **Manage** the Plugin you need Admin area. Apollo Manage System
 - To **Configure** the Plugin you need Admin area. Manage Plugins

Go to **Configuration > Access Control List**

Access control list is a list of permissions attached to customer roles. This list specifies the access rights of users to objects. Learn more about [access control list](#)

Store View - Demonstration Products

In the demo example setup, there is facility called Apollo Hotel which has 5 holiday units, each of which can be booked for a week Saturday to Saturday. This product has been called Longstay. Any number of weeks can be booked in the same unit.

Apollo Hotel also has 3 rooms that are shared which can be booked each night. This product has been called Shortstay.

Welcome to our nopCommerce version 4.5 Demo Store

Select Systems is a computer systems and technology solution developer and integration company. We can help you develop a comprehensive information technology solution to let you take hold of the eCommerce potential of your existing business operations. This is our demo website showing the features of nopCommerce and our Plugins. This website may show items and products on sale. These are not real items for sale and are used for the purposes of showing the features and operations of this website. If you have questions, see the nopCommerce [Documentation](#), or post in the [Forums](#) at [nopCommerce.com](#)

Categories and sub-categories can be used to group individual accommodation facilities at the same location or different types of booking regimes at a single facility.

Template - Apollo Hotel Longstay	From \$100.00
Template - Apollo Hotel Shortstay	From \$20.00
Template - Apollo Search Stays	From \$20.00

A similar category organisation can be used for Event Booking products and Rental Product.

When a user selects an accommodation event booking type product, appointment or rental products the associated Booking Paging is displayed.

The following pages show example of the different product configuration available using the plugin.

Note: Depending on which modules have been purchased and which Options have been configured then not all the following product types maybe be are available. The product options are determined at the time of plugin purchase.

Accommodation - Calendar Booking – Single Day Rooms

After a product is selected each availability for that product will be displayed in the Booking Calendar. The user can then view the availabilities and select an availability to determine the start date for the booking.

When the user selects an availability to determine the start date the Booking Form is displayed.

Accommodation Booking Form

Start Date : 26/09/2019 Select New Start Date Rooms : 0 Total : \$0.00 Number of Nights : 1 Add to cart

Description	Book	Please Select Booking Options	Price
Room 1 1 self-contained Holiday Room in Share House	<input type="checkbox"/>	Select the Booking Type * <input type="radio"/> Member <input type="radio"/> Non Member [+\$5.00]	Price: \$20.00 (Old price: \$22.00)
Room 2 1 self-contained Holiday Room in Share House	<input type="checkbox"/>	Select the Booking Type * <input type="radio"/> Member <input type="radio"/> Non Member [+\$5.00]	Price: \$20.00 (Old price: \$22.00)
Room 3 1 self-contained Holiday Room in Share House	<input type="checkbox"/>	Select the Booking Type * <input type="radio"/> Member <input type="radio"/> Non Member [+\$5.00]	Price: \$20.00 (Old price: \$22.00)

Product attributes can be used to define booking options for an order. The user can then select the number of rooms they wish to book, the number of nights they would like to book and the booking options. Alternatively, if the number of nights they require is not available then they can go back and select a new start date.

The Short Description and Product Attributes for each Single Product linked to the Group Product are displayed.

The total number of rooms selected, and the total costs of all options based on the price is displayed in the header

Add to Cart

When all the details are correct the item can be added to the Shopping Cart. The shopping cart displays the rooms and the dates which are be booked.

Shopping cart

Enhance Standard Rental Products

For Rental Type Products the plugin extends the current Rental System to include inventory management and reporting, allowing you to keep stock on individual rental products. It also allows you to Mark items as Picked up and Returned.

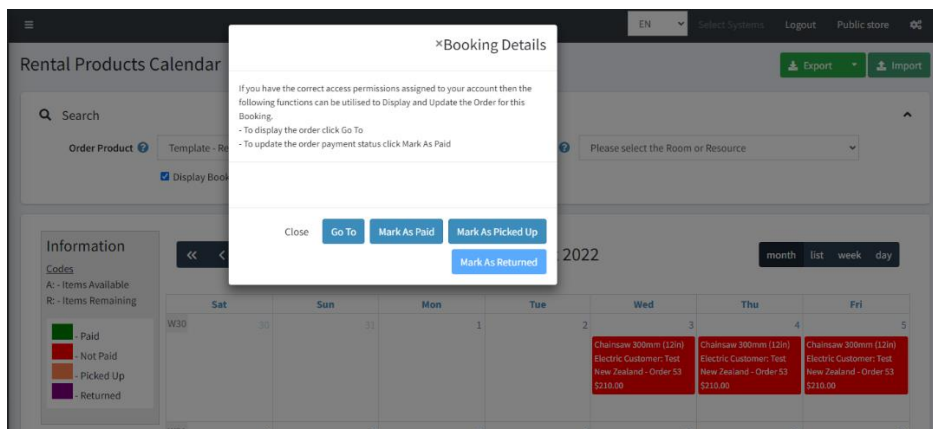

To book a rental product there must be an availability setup for each product with an available quantity of items.

When setting up the product do not select Manage Inventory in the product configuration as this is managed by the plugin. If no dates are available to book the system will automatically select the next available date for the product.

Rental Product Status

Using the Calendar Rented Products can be **Marked as Paid** and **Marked as Picked up** and **Marked as Returned**

Rental Calendar Products

The Calendar Bookings function can also be used for rental type products when you want to offer the calendar interface for your customers.

eBike Rental

Accommodation Option Products

Accommodation Option Products allow to use a search function to find rooms which meet the search criteria:

i.e. A room available from the Check-In Date to the Check-Out Date and for the Room Type Selected

Enter the Search Criteria and Click Search and the available room options will be displayed

For example:

Associated Products for Accommodation Options

In additional if the Grouped Product also has Related Products, then they will be displayed along with the accommodation options and the customer is able to also select these products as options when making the booking.

In the above example Event Ticket Types Standard and VIP Ticket are displayed and the customer can select the number of each to add to the cart with the Accommodation Booking

Admin View

The backend Administration has several new pages for managing the Setup of Accommodation Availabilities as well as Managing and Reporting on Accommodation Booking Orders or Reservations.

Calendar

The calendar allows the user to select the Group Product to see the overview of availabilities for a particular facility or booking regime. Once the Group product has been selected then if required the associated product can be selected to narrow down what items are displayed.

The screenshot shows the 'Accommodation Calendar' interface. At the top right, there are 'Export' and 'Import' buttons. Below them is a search bar and two dropdown menus: 'Order Product' (set to 'Template - Apollo Hotel Longstay') and 'Associated Product' (set to 'Please select the Room or Resource'). A checkbox for 'Display Bookings' is present. The main area features a calendar for 'October 2022' with navigation arrows and a 'today' button. A legend on the left defines colors: LowAvailability (orange), Available (green), NotAvailable (teal), Booked (red), and Closed (blue). The calendar grid shows dates from 1 to 20. For each date, a list of units is shown with their status and price. For example, on Saturday (1st), Unit 5 is 'NotAvailable' at \$180.00. On Sunday (8th), all units are 'Available'.

The calendar has other various controls for manipulating the view.

The booking checkbox switches the mode of the calendar from displaying availabilities to display the orders for those availabilities.

Create a new availability

1. Select the Product

This screenshot shows the 'Accommodation Calendar' with the 'Associated Product' dropdown menu open. The 'Order Product' is 'Apollo Hotel Longstay'. The calendar shows dates 5, 6, 1, 2, 10, and 11. The dropdown menu lists 'Unit 1' through 'Unit 5' as options, with 'Unit 1' selected.

2. Click on the required start date and the Add

- Enter the Start and End Date
- Select The Room Type in the Case which you are using Accommodation Option format
- Select the Status - normally be set to "Available"
- Enter the Product Cost - the Cost to Book this slot
- Available is the Number of Availabilities for this date slot which are available to be booked
- Remaining is the Number of Availabilities for this date slot which are remaining to be booked
- The Note which is Displayed to the customer
- Description is for internal use
- Waiting list is a manually maintained list of people who would like to book this date slot if it becomes available
- Colour is used to differentiate the availabilities on the calendar
- Is Delete – Used to delete an existing Availability
- Click Save

The new Availability will then be displayed in the Calendar

Sat	Sun	Mon	Tue	Wed	Thu	Fri
4	30	31	1	2	3	4
5	6	7	8	9	10	11
Unit 1 \$150.00						

Displaying Bookings

The Calendar can also be used to display bookings by selecting the Display Bookings Checkbox at the top of the page

The screenshot shows the 'Accommodation Calendar' interface. At the top right, there are 'Export' and 'Import' buttons. Below that is a search bar and two dropdown menus: 'Order Product' (set to 'eBike Rental North') and 'Associated Product' (set to 'Please select the Room or Resource'). A checkbox labeled 'Display Bookings (Enable and Click on a Day to Produce Report)' is checked. On the left, an 'Information' panel shows 'Codes' (A: Sites Available, R: Sites Remaining) and a legend for 'Paid' (green) and 'Not Paid' (red). The main calendar is for 'October 2022' and shows a grid of days. A yellow highlight covers the dates 8th to 14th. On the 12th and 13th, there are green booking cards for 'Momentum Transend' with details: 'Customer: Test New', 'Zealand - Order 71', and '\$120.00'. Navigation arrows and a 'today' button are at the top of the calendar grid.

Calendar Booking Functions

You can click on a specific booking to display a number of functions

The 'Booking Details' modal window has a title bar with a close button. The main content area contains the following text: 'If you have the correct access permissions assigned to your account then the following functions can be utilised to Display and Update the Order for this Booking.' Below this are two bullet points: '- To display the order click Go To' and '- To update the order payment status click Mark As Paid'. At the bottom of the modal, there are three buttons: 'Close', 'Go To', and 'Mark As Paid'.

- The **Go To** button will display the respective order for this booking
- Click on the **Mark as Paid** Button to make this order as paid

Export / Import of Availabilities

If you wish to create more availabilities for this same Product then you can use the Export / Import Function to Create a list using this first entry as a template.

Apollo Hotel Longstay		
<	>	today
Sat	Sun	
5	1	2
6	8	9
Unit 1 \$20.00 Sample Description - Sample Waiting List		
7	15	16

Click on the Export Button to create an Excel File

The dates are exported as General String format in the excel spreadsheet

- Change the Format to Date
- Re-enter the First Date
- Use formulas to enter the End Date
- Copy to addition rows
- Build up the import file and save
- The last field "Update" allows the overwriting of existing entries.
 - o Set it to FALSE to create new availabilities
 - o Set it to TRUE to updated existing availabilities
 - o **Note:** Update should be used with caution as current booking data maybe overwritten usually you should only use update function when updating records in the future that have not been booked

Note: When using formulas ensure you save your formula file as template. Then replace all formulas with actual values and save as the actual import file. This way you keep your original file as a template for re-use.

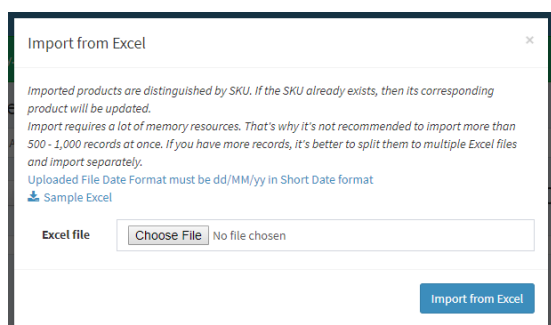

Excel Export File

Import File

There is a link to a sample file that can be used for importing or you can use the export file. It is very important to double check the data is in the correct format and the dates are correctly entered in short date format before importing the file.

When importing the system uses the SKU as the key along with the Start and Finish date to update an existing record for the import. You can then edit this file to change the SKU and import for other rooms or units under the other Simple Products linked to this facility or booking regime

It is best to practice using a one or two line import file before trying to setup a complete array of bookings. This is because if there is any problem then it may mean you need to individually delete the availabilities created in error.

Click the Import Button when the file is ready.

- Select the file
- Click on the Import from Excel Button

Reselect the Product to see the results are correct

February 2020

Defining multiple availabilities on the same day

Due to the limitations of the current system it is not possible to define two availabilities for the same product on the same day.

If this is needed then setup a second or more associated product and add the next availability to that product. An example of this configuration is where there are five options to book a remedial massage on the same day.

To setup this configuration you need 1 group product and 5 associated products linked to the group product.

Then one availability is defined for each product available on the day.

13	14
09:00 AM Remedial Massage \$80.00	
10:30 AM Remedial Massage \$80.00	
12:00 PM Remedial Massage \$80.00	
01:30 PM Remedial Massage \$80.00	
03:00 PM Remedial Massage \$80.00	

Sample Files

There are sample import files in the Plugin Zip file directory called Sample Import Files

Name	Date modified
Accommodation Import File - Add to Apollo Long Stay.xlsx	4/10/2020 9:03 AM
Bookings Import File - Add to Diving Course.xlsx	4/10/2020 9:03 AM
Rentals Import File - Add to Chainsaw Rental.xlsx	4/10/2020 9:03 AM
Sample Import using Formulas.xlsx	4/10/2020 9:04 AM

Alternatively the Demo Products can be exported and edited.

Configuring Appointments

Appointments work differently to other products in that the availabilities are automatically generated from the settings. There are a specific group of settings which define the operation.

See the Manage System option in the menu

Appointment Availabilities

There are three ways to setup Availabilities for Appointments

- Default Values
- Produce Default Values
- Weekly Schedule

1. Default Values

All products use the same Start Time Finish Time, Duration and there are a specific number of bookings available for all slots

The availabilities on a particular date are automatically populated based on the Default Settings

The screenshot shows the 'Configure - Apollo' interface. At the top, there is a 'Multi-store configuration for' dropdown menu set to 'All stores'. Below this, there are two tabs: 'Plugin Configuration' and 'Appointment Configuration'. The 'Appointment Configuration' tab is active, displaying 'Appointment Availability Option Default Settings used to automatically populate the Appointment Time options'. The settings include: 'Start Time' set to '10:00 AM', 'End Time' set to '5:00 PM', and 'Duration' set to '30'. There are circular refresh icons next to the time fields and up/down arrows next to the duration field. A blue 'Save' button is located at the bottom of the settings area.

The default Settings are used where there is no specific record setup for a product

This will result in the following times slots being made available for selection

The screenshot shows the appointment booking interface. It starts with the prompt 'Please select the date: *' followed by a date input field containing '17/09/2020' and a calendar icon. Below this is the prompt 'Please select the time' followed by a grid of time slots: 10:00 AM, 10:30 AM, 11:00 AM, 11:30 AM, 12:00 PM, 12:30 PM, 1:00 PM, 1:30 PM, 2:00 PM, 2:30 PM, 3:00 PM, 3:30 PM, 4:00 PM, and 4:30 PM. Below the time slots, the price '\$120.00' is displayed. At the bottom, there is a quantity input field with the number '1' and a blue 'BOOK' button.

2. Product Default Settings

This is where there are settings added for a particular product, they will override the default settings and be used for only for the specific product

3. Weekly Schedule

A weekly schedule of times can be setup for each product

Appointment Configurations Settings can be created for a specific Day which override the Default Settings above. Select the Product and Enter the requested values which will be used to automatically populate the time selection options presented to the customer. Ensure the End Time entered is after the Start Time.

Product Name	Day	Start Time	End Time	Duration	Available	Product Cost	Colour	Edit	Delete
Doctor Appointment (Joe)	Monday	10:00 AM	3:00 PM	25	1	50	Green		
Doctor Appointment (Joe)	Wednesday	10:00 AM	3:00 PM	25	1	70	OrangeRed		

Navigation: < 1 > Show 15 items 1-2 of 2 items

Using the popup form you can select the product then enter the Day, Start and Finish Times. Slot Duration, Number of availabilities place per slot, Product Cost and the Color to display

The screenshot shows a web browser window with the URL `v43demo.selectsystems.com.au/Plugins/ProductAppointmentSettings/ProductAppointmentConfig...`. The page title is "Edit Product Configuration Settings". The form contains the following fields:

- Product Name:** A dropdown menu with the text "Please Select the Product".
- Day:** A dropdown menu with "Monday" selected.
- Start Time:** A time picker showing "10:00 AM".
- End Time:** A time picker showing "3:00 PM".
- Duration:** A spinner control showing "25".
- Quantity:** A spinner control showing "1".
- Product Cost:** A spinner control showing "\$0.00".
- Colour:** A dropdown menu with "OrangeRed" selected.

A blue "Save" button is located in the top right corner of the form area.

A more detailed schedule can also be entered using this option.

For example, this schedule is for [Doctor Appointment \(Dr. Joe\)](#) as follows

Group Product Appointment Type Product
 Associated Product Doctor Appointment (Joe)

Search

Appointment Configurations Settings can be created for a specific Day which override the Default Settings above. Select the Product and Enter the requested values which will be used to automatically populate the time selection options presented to the customer. Product type

Associated to product

Product template

Visible individually

Product Type: Is used to determine if the Product is a Grouping Product or Purchasable Product.

The options are:

- Grouped (Product with Variants) – Use this option to set the product as a Grouping Product
- Simple Product – Use this option to set the product as a Product which can be purchased in the store

Product Template: Must be set to display the appropriate product template for the different types of products:

The options are:

- Accommodation Calendar - for Accommodation Products
- Booking Calendar – for Event and Booking Products

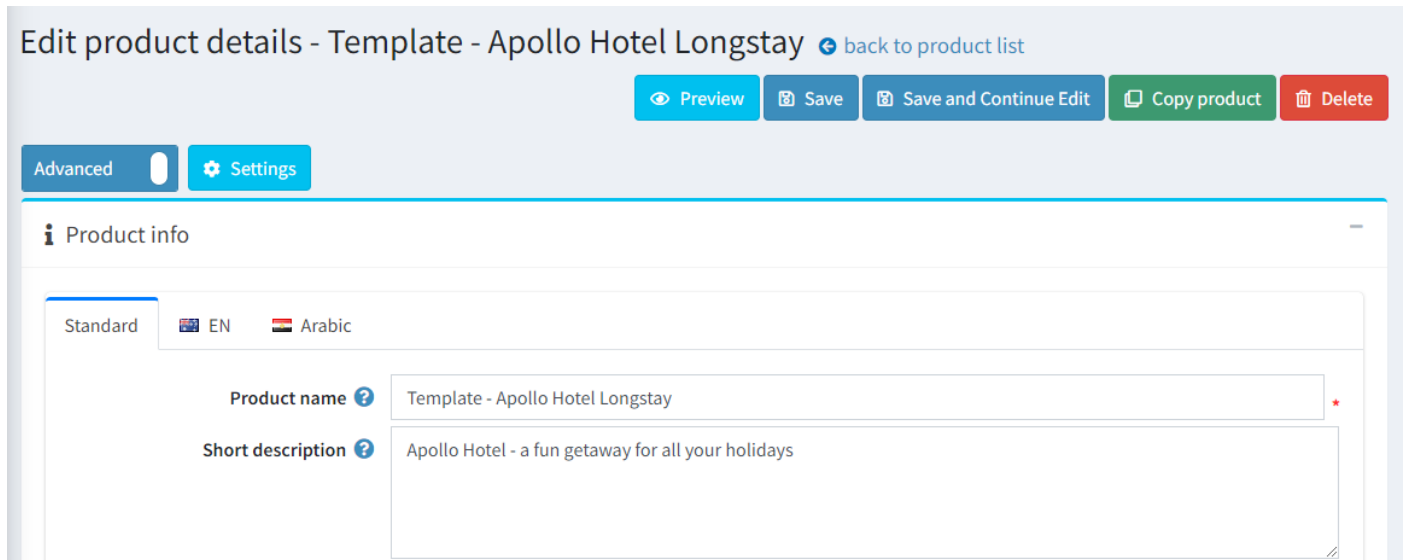

Note: Appointment Calendar and Rental Calendar – for appointment and rental Products use the standard nopCommerce templates

Using Installed Product Templates

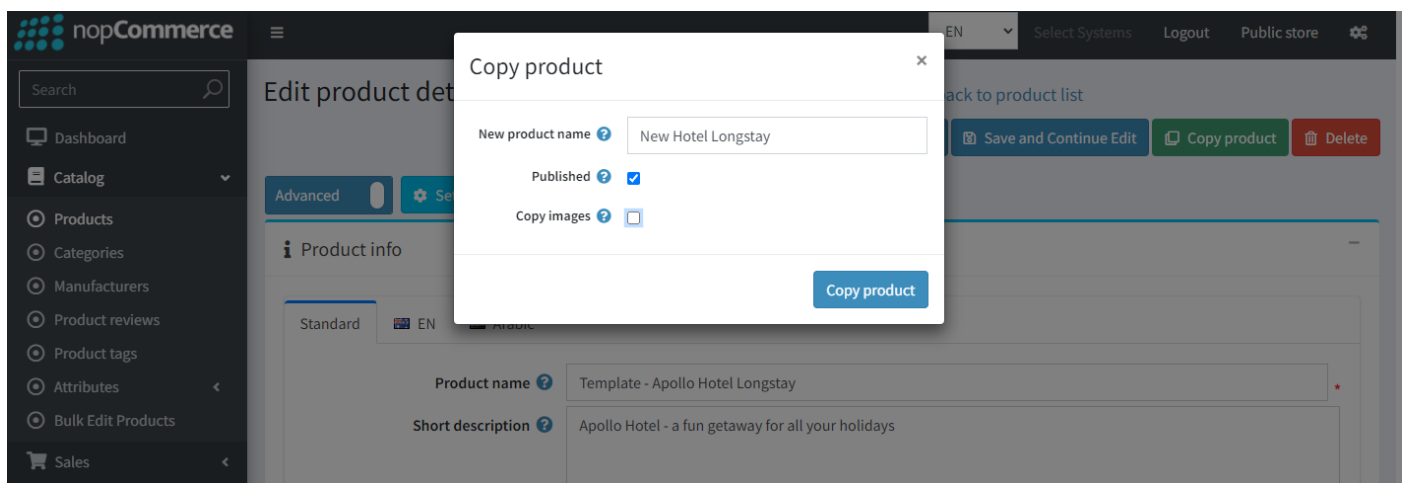

The best option is utilising the Demonstration Products setup by the Install as templates which can be used to setup other new products.

Once you have used the plugin in demonstration mode and are ready to setup you own products. Then use the Product Copy function to copy the required template to a new product.

For example see this template product

Copy and Rename as

Then you can

- Edit the new product name and other details
- Define the new product as an **Apollo type** in **Manage Configuration**
- Create **Availabilities** as required using the respective calendar functions
- Unpublish the Installed Template Products

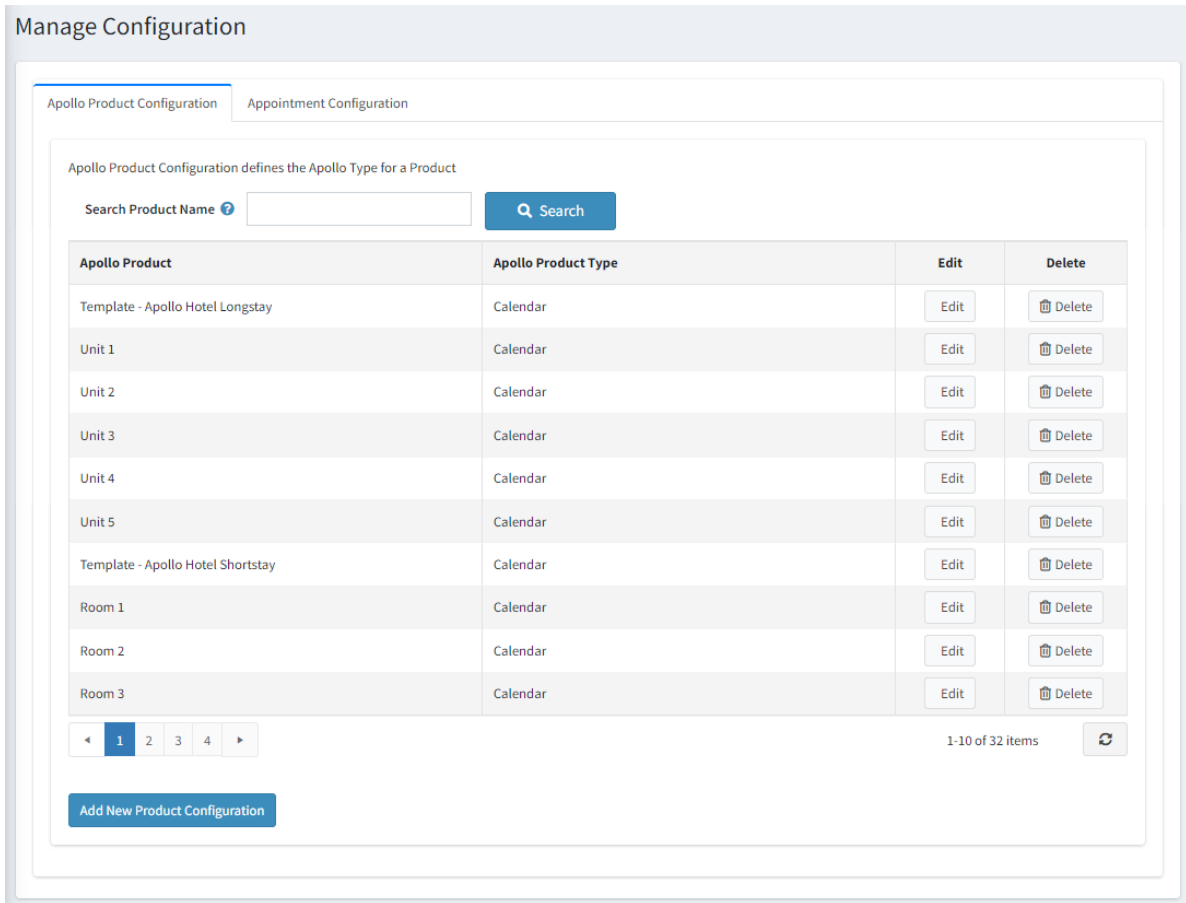

Later on in the future if you ever need to make a new product similar then simply search for products with the name Template. Find the appropriate template then copy and rename.

Keeping the templates unchanged from the ones installed also provides a reference to check the correct way to setup an Apollo Product.

Configure a Product as an Apollo Type

In addition to setup the product up with the correct type and template, etc. We also need to define the Product Configuration.

Manage Configuration

The screenshot shows the 'Manage Configuration' interface. It has two tabs: 'Apollo Product Configuration' (active) and 'Appointment Configuration'. Below the tabs, there is a heading: 'Apollo Product Configuration defines the Apollo Type for a Product'. A search bar with the placeholder 'Search Product Name' and a 'Search' button is present. Below the search bar is a table with the following data:

Apollo Product	Apollo Product Type	Edit	Delete
Template - Apollo Hotel Longstay	Calendar	Edit	Delete
Unit 1	Calendar	Edit	Delete
Unit 2	Calendar	Edit	Delete
Unit 3	Calendar	Edit	Delete
Unit 4	Calendar	Edit	Delete
Unit 5	Calendar	Edit	Delete
Template - Apollo Hotel Shortstay	Calendar	Edit	Delete
Room 1	Calendar	Edit	Delete
Room 2	Calendar	Edit	Delete
Room 3	Calendar	Calendar	Delete

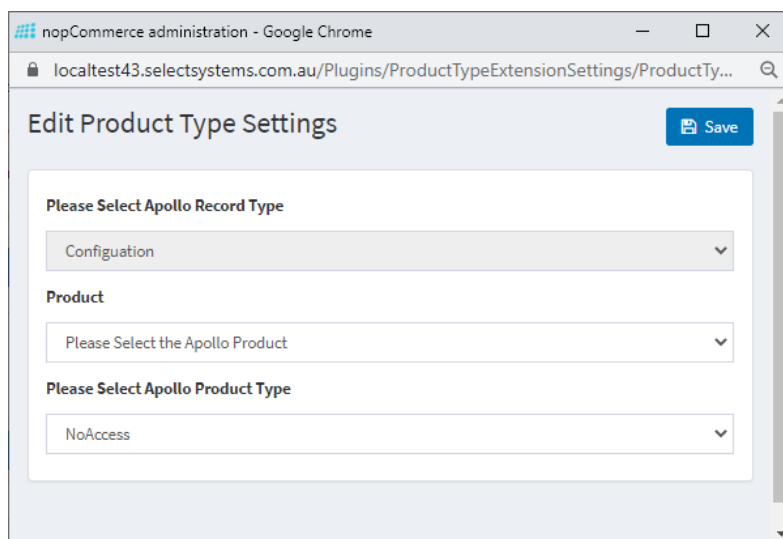

Below the table is a pagination control showing '1-10 of 32 items' and a refresh button. At the bottom left, there is a button labeled 'Add New Product Configuration'.

The demonstration product configuration is setup as part of the install. For all new products you need to create a record in the Product Configuration. To create a new record, click “Add New Product Configuration”

Add New Product Configuration

Enter the Record Type is selected as Configuration.

Then enter select the Apollo Product and Apollo Product Type

The screenshot shows a browser window titled 'nopCommerce administration - Google Chrome'. The address bar shows 'localhost43.selectsystems.com.au/Plugins/ProductTypeExtensionSettings/ProductTy...'. The page title is 'Edit Product Type Settings' with a 'Save' button. The form contains three dropdown menus:

- Please Select Apollo Record Type:** Configuration
- Product:** Please Select the Apollo Product
- Please Select Apollo Product Type:** NoAccess

Defining a Product as an Apollo type will then enable the specific functions associated with that type

Configure Enhance Standard Rental Products

The New functionality provide in this plugin is built on the existing functions. The main difference is that the rental period dates entered are checked for availability using the preconfigured availabilities entered via the Rental Calendar

The system and allows the selection of dates based via two methods:

Chainsaw 300mm (12in) Electric

This chainsaw is perfect for pruning and horticulture jobs. Lightweight and very easy to use.

SKU: RP-CS2

Start date:

End date:

To use rental products tick the Is Rental option and then enter the required values in the product configuration

1. To use set duration for hire period and automatically

 Rental

Is rental 

Rental period length  30

Rental period  Days

The **End date** will be automatically entered based on the **Start date** entered and cannot be changed by the customer. In the case of the 30 day hire the end date is automatically entered as follows:

Chainsaw 300mm (12in) Cordless

This chainsaw is perfect for pruning and horticulture jobs.

Lightweight and very easy to use. Standard 30 day hire Period

SKU: RP-CS1

Start date:

End date:

2. The use date-based selection for the duration if hire set the Rental Period Length to 9999.

The screenshot shows a 'Rental' configuration window. At the top left is a calendar icon and the word 'Rental'. Below this, there are three settings: 'Is rental' with a checked checkbox, 'Rental period length' set to '9999', and 'Rental period' set to 'Days'. Each setting has a question mark icon to its left.

The customer is then able to select both the **Start date** and **End date** for the hire period.

This screenshot shows the date selection process. It features two date input fields: 'Start date' with '20/07/2022' and 'End date' with '27/07/2022'. Below these is a calendar for July 2022. The calendar shows days from Sunday to Saturday. The date '16' is highlighted with a blue box, and the date '27' is highlighted with an orange box. The text 'Saturday, July 16, 2022' is displayed at the bottom of the calendar.

The price for the hire period is then calculated based of the Rental availability prices entered in the system and summed up for the duration of the hire period.

Chainsaw 300mm (12in) Cordless

This chainsaw is perfect for pruning and horticulture jobs.
Lightweight and very easy to use. Standard 30 day hire Period

SKU: RP-CS1

Rental price:

Your Price: \$1,550.00

Start date:

End date:

 + - RENT

Product Attribute Pricing

This is where you can configure accommodation and booking products to use Product Attributes to define to pricing for the product rather than the Accommodation Availability.

If you look at the Demonstration product **Momentum Transend** you can see the product attributes have been define for a 14 day hire period.

Product Information Pages

Information pages allow you to turn a standard product view into an information overview page. You can link this page to one of the existing calendar or bookings pages.

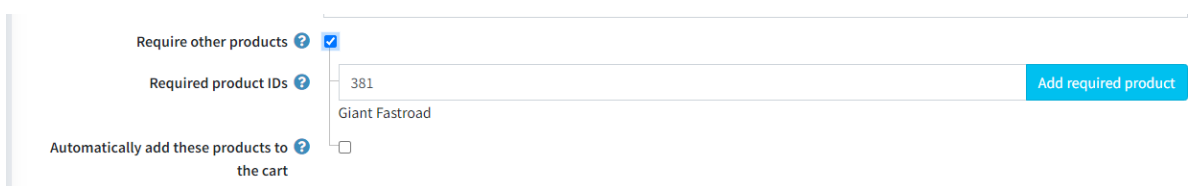

The information overview page allows you to provide extra information for the customer before sending them to a booking page to make an actual booking.

An apollo product type is available in **Manage Configuration** to define a product as an information page.

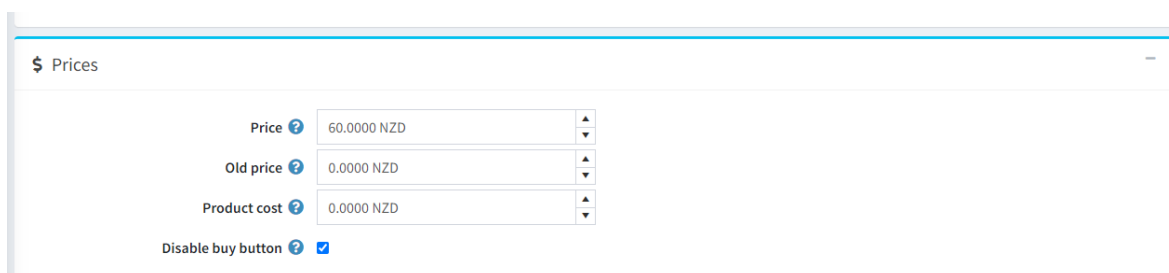

In the following configuration example the **Giant Fastroad – Information** page is a product page that links to the **Giant Fastroad** booking page

When you edit the **Giant Fastroad – Information** product you can see it uses the Required product Ids field to connect the two products

In addition the **Giant Fastroad – Information** product is set with the Disable buy enabled

This is so the Information product can not be purchased. Rather it will display a button to enable purchase of the **Giant Fastroad** product

Integrated battery

The new EnergyPak Smart Compact 500 battery delivers long-range power and is smoothly integrated into the frame for sleek design.

Extra range

Option to carry an EnergyPak Plus range extender, which provides 250Wh of additional power.

Key Features

- Frame: ALUXX grade Aluminium
- Fork: ALUXX grade Aluminium, 12x100 thru-axle

As show a Make a booking for the Product Button is show instead of a Add to Cart or Buy Now button.

Using the Rental Option for Calendar Retails

All other product functions and parameters can be used as normal including the **Is rental** option and the setting of an overview rental price as show above.

In this case the following values are entered

Rental

Is rental

Rental period length

Rental period

Installing the Plugin

The plugin is provided as a standard install package in zip form which can be uploaded on the Local Plugins page.

1. The installation of the plugin follows the standard nopCommerce procedure.
 - a. Refer to <https://docs.nopcommerce.com/user-guide/configuring/system/plugins.html>
2. Use the “Upload plugin or theme” button on the Configuration > Plugin page
3. Once installed the you can configure the plugin.
4. After configuring the plugin Restart the Application – Click the Icon in the top

Configure

Operation Settings

Configure - Apollo System

Operation Settings Configuration Settings

Configuration Data and Demonstration Products will be installed when a system (Accommodation, Bookings, Appointments or Rentals) is enabled for All Stores. To display the Demonstration Products in other stores manually adjust the Product and Category Records. Ensure the End Date Attribute Display Order is Higher than Start Date in Product Attributes

Plugin Enabled

Calendar System Enabled **Calendar URL Pattern**

Calendar Booking System Enabled **Calendar Booking URL Pattern**

Appointment System Enabled **Appointment URL Pattern**

Rental System Enabled **Rental URL Pattern**

Maximum Number of Nights

Report First Name Attribute

Report Last Name Attribute

Hidden Product Attribute

Available Room Types

Enable Plugin

Click the Enable Checkbox to Enable the Plugin Functionality

Product Configuration Types

To setup the plugin or define the options click the required function checkbox on the Configure button in the Menu.

Each of the main function areas Accommodation, Event Bookings, Appointments and Rentals can be used independently so only select the options you want to install.

- Click the **Calendar System Enabled** checkbox to Enable the Accommodation and Calendar Functionality
 - o You can also change the default Url Pattern
- Click the **Calendar Booking System Enabled** checkbox to Enable the Event Calendar Booking Functionality
 - o You can also change the default Url Pattern
- Click the **Appointment System Enabled** checkbox to Enable the Rental System add on Functionality
 - o You can also change the default Url Pattern
- Click the **Rental System Enabled** checkbox to Enable the Rental System add on Functionality
 - o You can also change the default Url Pattern

URL Pattern

The Url Pattern is used in the front end in association with the Product SEO Url Setting. The Url Pattern can be any text that is not the same as or used as a Category SEO Url.

For example in this Url : <https://yourstore.com/appointment/appointment-type-product>

/Appointment/ is this value from the Url Pattern Setting

Maximum Number of Nights

Select the maximum number of nights which are available to booked in the system

Report First Name Attribute

This is the attribute that is used to populate the Customer First Name attribute when used on products and then used to select the name for event booking participant reports

Report Last Name Attribute

This is the attribute that is used to populate the Customer Last Name attribute when used on products and then used to select the name for event booking participant reports

Hidden Product Attribute

Select the Product Attributes which are you do not want to display in the Store View Booking Form

- Typically, these are the Attributes for
 - Accommodation being Booking End Date, Bookings Start Date
 - Booking Events being Booking Date, Finish Time, Start Time
- These attributes are setup as part of the install process
- You can leave his field blank when first setting up the Plugin and they should be filled in Automatically

Available Room Types Attributes

Room Type Attributes are used to define types of accommodation rooms. Product Attributes are used to defined Room Types. Then select the types you wish to make available in configurations views here. Room types are used with Accommodation products defined as type “Accommodation Option”

By default the Product Attributes: Single Room, Double Room and Family Room are setup with the demonstration products.

Plugin Configuration Settings

Configure - Apollo System

Operation Settings | Configuration Settings

Please restart the application once the configuration has been modified.
Enter the settings and click save. When upgrading and you wish to keep existing data then do not select the delete options below

Display Customer Calendar <input checked="" type="checkbox"/>	Display cart after adding a product <input checked="" type="checkbox"/>
Display Quantity Entry <input checked="" type="checkbox"/>	Bookings Multiple Attributes <input type="checkbox"/>
Separate Product Bookings <input type="checkbox"/>	Group Price Dont Display Zero <input checked="" type="checkbox"/>
One Product Type <input checked="" type="checkbox"/>	Automatically Cancel Orders <input type="checkbox"/>
Send Order Reminders <input checked="" type="checkbox"/>	Reminder Days <input type="text" value="4"/>
Use NopTemplates Ajax Cart <input checked="" type="checkbox"/>	Delete Tables on Uninstall <input type="checkbox"/>
Test Mode <input checked="" type="checkbox"/>	Delete Configuration Data on Uninstall <input type="checkbox"/>

Attachment Files Directory Location

Public Key

Private Key

Display Customer Calendar

Select this option if you want to display the customer calendar showing bookings in the Customer's Account

Display Quantity Entry

For some products there can be multiple quantities available. Select this option to display the quantity box. Otherwise all products default to Quantity of 1

Separate Product Bookings

Select this option if you want Order Items to be grouped by price in the Shopping Cart and Orders

One Product Type

Select this option if you only allow one product type to be purchased on each order. It can also be used to limit the type of product that can be purchase together. That is only Apollo products and no standard products can be booked on the one order or only standard products and no Apollo products can be booked on the one order.

Send Order Reminders

Select this option to automatically send Order Reminders to customers. Refer to the Email Templates below. Also see the Reminder Days Setting

Use Nop Templates Ajax Cart

Select this option is you have installed and enables the Nop-Templates Ajax Cart Plugin

Test Mode

Select this option to log information message to the System log file. This can be useful if you trying to diagnose configuration issues.

Display cart after adding a product

If selected then the cart will be displayed after adding an Apollo product.

Bookings Multiple Attributes

If selected then Product attributes will be displayed on the Booking form even if book quantity is greater than 1

Group Price Dont Display Zero

If selected then when there are no Calendar type availabilities with status "Available" remaining in the future then do not show a zero price for a Grouped product in the Category. Rather the Group product will display the Product default price if available.

Automatically Cancel Orders

If selected then an automatic Task (See Schedule Tasks) will cancel orders if they are not Paid within 24 hours.

Reminder Days

The number of days before a booking the automatic reminder email is sent

Delete Tables on Uninstall

This setting is used if the plugin needs to be uninstalled.

When un-installing the plugin, you can decide if you want the tables and all existing product data to be deleted or you want to keep the tables and existing data

To delete the tables and the configuration click the Checkbox

Warning: Only select the **Delete Tables on Uninstall** option when you no longer plan to use the plugin or you want to clear all existing data, remove tables and start again after a reinstall.

Delete Configuration on Uninstall

This setting is used if the plugin needs to be uninstalled and you will not be reinstalling and want to delete the system configuration

- When un-installing the plugin, you can decide if you want delete or keep the existing configuration

Attachment Files Directory Location

Enter the message template default file attachment directory

- For example, the uploaded directory can be used i.e. ~/wwwroot/images/uploaded/

Demonstration Licence Keys

When the plugin is first installed it will be setup in demonstration mode allowing all product types to be enabled and viewed. The demo keys will only allow the plugin to operate for 14 days after which they will expire.

Purchased Licence Keys

When you first install the plugin Demonstration keys will be automatically generated. The plugin can be operated in demo mode for 14 days. The purchase licence keys will be provided via email normally within 1 day after purchase. The purchase licence keys can then be entered as follows:

Public Key

This is the plugin licence public key provided. When you first install the plugin a Demonstration key will be saved. Change this value to the Public key supplied in the email when received.

Private Key

This is the plugin licence public key provided. When you first install the plugin a Demonstration key will be saved. Change this value to the Private key supplied in the email when received.

Demonstration Data and Configuration

Selecting the Accommodation System Enabled will setup the demonstration products and configuration for accommodation type of products: Apollo Log Stay and Apollo Short Stay

Selecting the Event Bookings System Enabled will setup the demonstration products and configuration for booking type of products: Diving Course, Cooking Course and Remedial Massage

Selecting the Appointment System Enabled will setup the demonstration products and configuration for a medical practice.

Selecting the Rental System Enabled will setup the demonstration products and configuration two rental type of products

The install also setups Categories and Product Attributes which can be used for additional configuration – see below.

Functions of Specific Settings

Separate Product Bookings

When a products availabilities are setup with different prices you can use this setting to separate and collected each day's bookings based on the **Availability Price**

Template - Apollo Hotel Shortstay

Apollo Hotel - a fun getaway for all your holidays

July 2022 month list week day

Sun	Mon	Tue	Wed	Thu	Fri
26	27	28	29	30	1

Note: This second option of this function may not work if other plugins override the Add to Cart functionality

Product Attributes

Attributes can be set to configure the Product arrangement functions and configurations

Group Product Attributes

Attribute	Text prompt	Is Required	Control type	Display order	Validation rules	Condition	Edit
Calendar First Day	Please enter the first day shown on the Calendar	✗	Textbox	1	Default value: Monday		Edit
Calendar Multiselect	Please enter the selection type for the Booking Calendar	✗	Textbox	2	Default value: True		Edit
Document Link	Please enter the document name	✗	Textbox	3	Default value: Document.pdf		Edit

These attributes are setup on the Group product to define the operation for the group of associated products. There are currently three (3) attribute functions:

1. Calendar First Day - determines which day will be shown in the first column day of the calendar.
i.e. Monday, Tuesday, Wednesday, Thursday, Friday, Saturday or Sunday

The screenshot shows the 'Edit product attribute' interface for the 'Calendar First Day' attribute. The form is titled 'Edit product attribute' with a 'back to product details' link. It has two tabs: 'Info' and 'Condition'. The 'Info' tab is active, showing the following fields:

- Attribute:** Calendar First Day
- Text prompt:** Please enter the first day to be displayed on the Booking Calendar
- Is Required:**
- Control type:** Textbox
- Display order:** 1 (with up/down arrows)
- Minimum length:** (empty field with up/down arrows)
- Maximum length:** (empty field with up/down arrows)
- Default value:** Monday

2. Calendar Multiselect - determines if the selection on the calendar is for one availability selected or for all availabilities shown on the same day

The screenshot shows the 'Edit product attribute' interface for the 'Calendar Multiselect' attribute. The form is titled 'Edit product attribute' with a 'back to product details' link. It has two tabs: 'Info' and 'Condition'. The 'Info' tab is active, showing the following fields:

- Attribute:** Calendar Multiselect
- Text prompt:** Please enter the selection type for the Booking Calendar
- Is Required:**
- Control type:** Textbox
- Display order:** 2 (with up/down arrows)
- Minimum length:** (empty field with up/down arrows)
- Maximum length:** (empty field with up/down arrows)
- Default value:** True

Note: Seen here the Multiselect Attribute option described below is used to display multiple selection options in the booking form on the same day.

Template - Booking Type Product Booking Form

Please enter the options for this booking. Rem = Remaining Spots. Click Book to select this option.
 Enter the number of spots to book in Qty.
 Check the Total Price and then click Add to Cart and follow the checkout process to make a booking.

Start Date: 17/10/2022		Select New Start Date		Bookings : 0	Total : \$0.00	Book
Description	Book	Rem	Qty	Select Booking Options	Price	
Diving Course Hover to show full details	<input type="checkbox"/>	8	0	Is Gear Hire required? Not Required	Old price: \$290.00 Price: \$280.00	
Cooking Course Hover to show full details	<input type="checkbox"/>	10	0	Please select the course cuisine * Italian Please select the course level * Intermediate	Old price: \$40.00 Price: \$20.00	

- Document Link – a file name can be entered which is attached the custom message templates setup up for each product type. The file needs to be stored in the configured directory detailed in configuration above.

Info Condition

Attribute Document Link

Maximum length

Default value Terms%20and%20Conditions.pdf

- Calendar Title – determines how the title is displayed and formatted on the calendar

Edit product attribute back to product details Save Save and Continue Edit Delete

Info

Attribute Calendar Title

Text prompt Please enter the Calendar Display Format (e.g. Name,Space,Price,Space,Remaining)

Is Required

Control type Textbox

Default value Name

Display order 0

Minimum length

Maximum length

The tokens that can be entered are

- Name – The Product Name will be displayed

- Price – The Price will be displayed
- Remaining – The Remaining availabilities will be displayed
- Space – a Space is entered in the format
- NewLine – a new line is created

Enter the tokens in the **Default Value** separate by a comma

In the above example on the name is displayed

If no attribute is added then the default is

"Name,NewLine,Remaining,NewLine,Price"

Simple Product Attributes

Attributes can be set to configure the Product arrangement functions. These attributes are setup on the Simple product to define the operation for the simple products. There are currently three (1) attribute functions:

1. **Email List** – Enables a list of email addresses to be added to each purchasable product which will receive the for Order Completed and Order Cancelled Notifications. See the above email templates which is used.

2. **Booking Start Date and Booking End Date** are used to store the dates of an accommodation booking

Attribute	Text prompt	Is Required	Control type	Display order	Validation rules	Condition	Edit
Booking Start Date	Please enter the Booking Start Date	✓	Date picker	1			
Booking End Date	Please enter the Booking End Date	✓	Date picker	2			
Booking Type	Select the Booking Type	✓	Radio button list	3			

These attributes are then display in the shopping cart and on the order details

Shopping cart

SKU	Image	Product(s)	Price	Qty.	Total	Remove
AC-AHSS-Room-1		Room 1 Booking Start Date: Monday, 4 October 2021 Booking End Date: Wednesday, 13 October 2021 Booking Type: Member Edit	\$20.00 incl tax	9	\$180.00 incl tax	

3. **Booking Date, Start Time, Finish Time** are used to store the information for an event booking

Attribute	Text prompt	Is Required	Control type	Display order	Validation rules	Condition	Edit
Booking Date	Please enter the Booking Date	✓	Date picker	1			
Start Time	Please enter the Start Time	✓	Textbox	2			
Finish Time	Please enter the Finish Time	✓	Textbox	3			

Or alternatively **Duration** can be used instead of Finish Time

Attribute	Text prompt	Is Required	Control type	Display order	Validation rules	Condition	Edit
Booking Date	Please enter the Booking Date	✓	Date picker	1			
Start Time	Please enter the Start Time	✓	Textbox	2			
Duration	Please select the duration	✓	Drop-down list	3			

These attributes are then display in the shopping cart and on the order details

Shopping cart

SKU	Image	Product(s)	Price	Qty.	Total	Remove
BP- RM		Remedial Massage Booking Date: Tuesday, 5 October 2021 Start Time: 12:00 PM Edit	\$80.00 incl tax	1	\$80.00 incl tax	
BP- CC		Cooking Course Booking Date: Monday, 4 October 2021 Start Time: 12:00 PM Duration: 60 Mins Edit	\$20.00 incl tax	1	\$20.00 incl tax	
BP- DC		Diving Course Booking Date: Monday, 4 October 2021 Start Time: 9:00 AM Finish Time: 2:00 PM Edit	\$290.00 incl tax	1	\$290.00 incl tax	

4. **Appointment Date, Appointment Time, Finish Time** are used to store the information for an appointment

Attribute	Text prompt	Is Required	Control type	Display order	Validation rules	Condition	Edit
Appointment Date	Please enter the Appointment Date	✓	Date picker	1			
Appointment Time	Please enter the Appointment Time	✓	Textbox	2

eBike Rental South	1	View	Edit	Delete

1 items Show 15 items 1-2 of 2 items

[Add new related product](#)

Also ensure you setup the attributes the same as the individual products

- This example is using the **Calendar Title** and **Calendar Multiselect Attribute** are used for eBike Rentals

Product attributes

Product attributes are quantifiable or descriptive aspects of a product (such as, color). For example, if you were to create an attribute for color, with the values of blue, green, yellow, and so on, you may want to apply this attribute to shirts, which you sell in various colors (you can adjust a price or weight for any of existing attribute values). You can add attribute for your product using existing list of attributes, or if you need to create a new one go to Catalog > Attributes > Product attributes. Please notice that if you want to manage inventory by product attributes (e.g. 5 green shirts and 3 blue ones), then ensure that "Inventory method" is set to "Track inventory by product attributes".

Attribute	Text prompt	Is Required	Control type	Display order	Validation rules	Condition	Edit
Calendar Title	Please enter the Calendar Display Format (e.g. Name,Space,Price,Space,Remaining)	✗	Textbox	0	Default value: Name		Edit
Calendar Multiselect	Please enter True to multiselect product variants	✗	Textbox	0	Default value: True		Edit

Reminder Emails

Checking the Reminder Emails Task using Test Mode

The screenshot displays a log interface with a search bar and a table of log entries. A calendar overlay is visible on the right side, showing the date Saturday, 8 October 2022. The log entries include:

<input type="checkbox"/>	Log level	Short message	Created on
<input type="checkbox"/>	Debug	Apollo Cancel Orders Task Run	08/10/2022 9:24:45 AM
<input type="checkbox"/>	Debug	Apollo Reminder Task Run	08/10/2022 9:24:45 AM
<input type="checkbox"/>	Debug	Apollo Reminder Check Last Run Date: 7/10/2022 12:00:00 AM	08/10/2022 9:24:45 AM
<input type="checkbox"/>	Debug	Apollo Reminder Task Run - Start Time: 09:00	08/10/2022 9:24:45 AM
<input type="checkbox"/>	Debug	Apollo Reminder Task - Order Query Count: 2 for Reminder Days: 4 Checking between Start:11/10/2022 12:00:00 AM and End: 13/10/2022 12:00:00 AM	08/10/2022 9:24:45 AM
<input type="checkbox"/>	Debug	Apollo Reminder Task - RelatedDate: 12/10/2022 12:00:00 AM	08/10/2022 9:24:45 AM
<input type="checkbox"/>	Debug	Apollo Reminder Task - Order Count: 1 for Reminder days: 4	08/10/2022 9:24:45 AM
<input type="checkbox"/>	Debug	Apollo Reminder Email sent for Order: 71	08/10/2022 9:24:45 AM

The calendar overlay shows the date Saturday, 8 October 2022, and includes a 'Today' section with an 'Add an event or reminder' input field. The log interface also features a 'Delete selected' and 'Clear log' button, a search bar, and a 'Show 100 items' dropdown.

With the reminder days set at 4 days and today is the 8th October. All orders with a booking starting between 11th October and 13th October will be searched and reminder emails sent.

Calendar Booking – Daily Report

It is possible to print a daily booking report for the Admin calendar

Display the Booking Calendar and select the Product required and the Display Bookings Option

Then you will see the days that have bookings

Click in the blank space in the calendar for the required day to print a report.

For this example click on 12th October and the following report will be displayed

Daily Report
<https://v45demo.selectsystems.com.au>
 Report Date 12/10/2022 11:00 AM

Customer	Product Details	Payment	Paid Date	Method
TestNew Zealand	eBike Rental North Momentum Transend <i>Booking Start Date: Wednesday, 12 October 2022</i> <i>Booking End Date: Friday, 14 October 2022</i> <i>Number of Days: 2 Days [+\$70.00]</i>	Paid	7/10/2022 9:04:27 PM	Check / Money Order

Calendar Event Booking – Participant List Names and Report

Create product attributes for the participant names

Product attributes

[Add new](#) [Delete \(selected\)](#)

Product attributes are quantifiable or descriptive aspects of a product (such as, color). For example, if you were to create an attribute for color, with the values of blue, green, yellow, and so on, you may want to apply this attribute to shirts, which you sell in various colors (you can adjust a price or weight for any of existing attribute values). You can add attributes to existing product on a product details page. [Learn more about product attributes](#)

<input type="checkbox"/>	Name	Edit
<input type="checkbox"/>	Participant First Name	Edit
<input type="checkbox"/>	Participant Last Name	Edit

Add the selected attributes in Configuration as above

Report First Name Attribute ?

Report Last Name Attribute ?

Add the Attributes to an event booking product using Text Box type

Attributes Attribute combinations

Attribute	Text prompt	Is Required	Control type	Display order	Validation rules	Condition	Edit
Booking Date	Please enter the Booking Date	✓	Date picker	1			Edit
Start Time	Please enter the Start Time	✓	Textbox	2			Edit
Course Cuisine	Please select the course cuisine	✓	Drop-down list	3			Edit
Course Level	Please select the course level	✓	Drop-down list	4			Edit
Participant First Name		✗	Textbox	5			Edit
Participant Last Name		✗	Textbox	6			Edit

◀ 1 ▶ Show 15 items 1-6 of 6 items [Refresh](#)

[Add a new attribute](#)

The names will then be automatically entered on the booking form

Template - Booking Type Product Booking Form

Please enter the options for this booking. Rem = Remaining Spots. Click Book to select this option.
 Enter the number of spots to book in Qty.
 Check the Total Price and then click Add to Cart and follow the checkout process to make a booking.

Start Date: 17/07/2022		Select New Start Date		Bookings : 0	Total : \$0.00	Book
Description	Book	Rem	Qty	Select Booking Options	Price	
Cooking Course Hover to show full details	<input type="checkbox"/>	10	0	Please select the course cuisine * Italian	Old price: \$40.00 Price: \$20.00	
				Please select the course level * Intermediate		
				Participant First Name John		
				Participant Last Name Smith		

The participants are then displayed in the Sales View

Lastname	Firstname	Street	Postcode	Town	Town
Smith	John	21 West 52nd Street	10021	New York	

Conditional Attributes

This plugin reconfigures the mode of operation for conditional attributes allowing one attribute to select the display visibility of another attribute

The screenshot shows the 'Edit product attribute' interface with the 'Condition' tab selected. The configuration is as follows:

Attribute	Boat Dive - Gear Size
Text prompt	Select Size Required
Is Required	<input type="checkbox"/>
Control type	Drop-down list
Display order	3

The screenshot shows a product page with a yellow background. The main heading is "Please Select Booking Options". Below it, the text "Is Gear Hire required?" is displayed above a dropdown menu that currently shows "Not Required".

The display of the "Boat Dive – Gear Size" attribute selector is conditional on the "Boat Dive – Hear Hire" attribute selector. If a non default "Boat Dive – Hear Hire" option is selcted then the "Boat Dive – Gear Size" attribute selector will be displayed allow the size to be selected

The screenshot shows the 'Edit product attribute' interface with the 'Condition' tab selected. The configuration is as follows:

Attribute	Boat Dive - Gear Hire
Text prompt	Is Gear Hire required?
Is Required	<input type="checkbox"/>
Control type	Drop-down list
Display order	3

The screenshot shows a product page with a yellow background. It features two dropdown menus: "Is Gear Hire required?" (set to "Basic Pack [+\$60.00]") and "Select Size Required" (set to "Please select"). A dropdown menu for "Select Size Required" is open, showing options: "Please select", "X-Small", "Small", "Medium", "Large", and "X-Large". To the right, a "Price" column shows "\$350.00".

To configure this mode, select the condition attribute option in product configuration

The screenshot shows the 'Edit product attribute' interface with the 'Condition' tab selected. The configuration is as follows:

Conditional attributes appear if a previous attribute is selected, such as having an option for personalizing clothir checked

Enable condition	<input checked="" type="checkbox"/>
Attribute	Boat Dive - Gear Hire

1. Tick the Enable condition Checkbox.
2. Select the attribute which is the mode switching control.
3. Select the "---" default option

Languages and Local Resource Strings

All information and field text strings displayed in admin and the front end-use Local Resource Strings which are defined for a particular language.

See <https://docs.nopcommerce.com/en/getting-started/advanced-configuration/localization.html>

For example

```
"Plugin.Apollo.Appointments.Title" = "Apollo"
```

Status Resource Strings

```
"Plugin.Apollo.Appointments.AvailabilityStatus.Closed" = "Closed",  
"Plugin.Apollo.Appointments.AvailabilityStatus.Booking" = "Booked",  
"Plugin.Apollo.Appointments.AvailabilityStatus.Available" = "Available",  
"Plugin.Apollo.Appointments.AvailabilityStatus.NotAvailable" = "NotAvailable",  
"Plugin.Apollo.Appointments.AvailabilityStatus.LowAvailability" = "LowAvailability",  
"Plugin.Apollo.Appointments.AvailabilityStatus.DepositPaid" = "DepositPaid",  
"Plugin.Apollo.Appointments.AvailabilityStatus.Paid" = "Paid",  
"Plugin.Apollo.Appointments.AvailabilityStatus.NotPaid" = "Not Paid",  
"Plugin.Apollo.Appointments.AvailabilityStatus.PickedUp" = "Picked Up",  
"Plugin.Apollo.Appointments.AvailabilityStatus.Returned" = "Returned",
```

All current resource strings used can be exported as and a Language XML Format file

This file can be edited and imported for other specific languages which are enabled in the system

To export the current local resources used for the system click the

[Export Local Resources](#)

Button on the Configure Menu option

Also note individual strings can be changed using the above instructions.

Rental Booking Resource String

Rental String In the case of Rentals the Local Resource Strings are used to identify the Rental Dates which are then displayed in the shopping cart and on the order details

```
Plugin.Apollo.Appointments.ShoppingCart.Rental.FormattedDate
```

Shopping cart

SKU	Image	Product(s)	Price	Qty.	Total	Remove
RP-CS1		Chainsaw 300mm (12in) Cordless Pickup date: 19/10/2021 - Return date: 19/10/2021 Edit	\$50.00 incl tax	1	\$50.00 incl tax	<input type="button" value="x"/>

Status Color Settings

If you would like to setting different colors for the various status these can be changed in the settings

See Configuration > Settings > All Settings

Change the hex values for the respecting status

Name	Current Color Value
ApolloStatusColorSettings.ApolloAvailabilityStatusConfiguration	#B0BEC5
ApolloStatusColorSettings.ApolloAvailabilityStatusReturned	#800080
ApolloStatusColorSettings.ApolloAvailabilityStatusPickedUp	#808000
ApolloStatusColorSettings.ApolloAvailabilityStatusProcessing	#FF7F50
ApolloStatusColorSettings.ApolloAvailabilityStatusPaid	#008000
ApolloStatusColorSettings.ApolloAvailabilityStatusNotPaid	#FF0000
ApolloStatusColorSettings.ApolloAvailabilityStatusDepositPaid	#FF00FF
ApolloStatusColorSettings.ApolloAvailabilityStatusLowAvailability	#FFA500
ApolloStatusColorSettings.ApolloAvailabilityStatusNotAvailable	#008B8B
ApolloStatusColorSettings.ApolloAvailabilityStatusAvailable	#008000
ApolloStatusColorSettings.ApolloAvailabilityStatusBooked	#FF0000
ApolloStatusColorSettings.ApolloAvailabilityStatusClosed	#0000FF

Other Settings (Set using All Settings)

There are a number of system settings which are not set using configuration. These setting values can be set using the Configuration - All Settings function in Admin

See <https://docs.nopcommerce.com/en/getting-started/advanced-configuration/all-settings.html>

The settings are:

Name	Description	Default Value
apolloSettings.ReportType	Set the default PDF report format	1
apolloSettings.LogoSize	Set the default PDF Logo Size	120
apolloSettings.SalesSearchFromDays	Number of Days of History to show is Sales	-7
apolloSettings.DisplayGroupProductName	Display Group product name in Sales Reports	true
apollosettings.SupportedStoreThemes	Nop-Templates Themes that are supported by the plugin	Motion, Emporium, Prisma, Pacific
apolloSettings.ReminderCheckTime	The time each day the check is done to send Order Reminders using 24hr Time format HH:MM	09:00

The **ReportType** will switch the report from:

- Landscape for type equal to 1
- Portrait for type equal to 2

LogoSize is used to set the size of the logo in PDF Reports. The default is 120. Increase the value for smaller logos to make them larger. Decrease the value for larger logos to make them smaller.

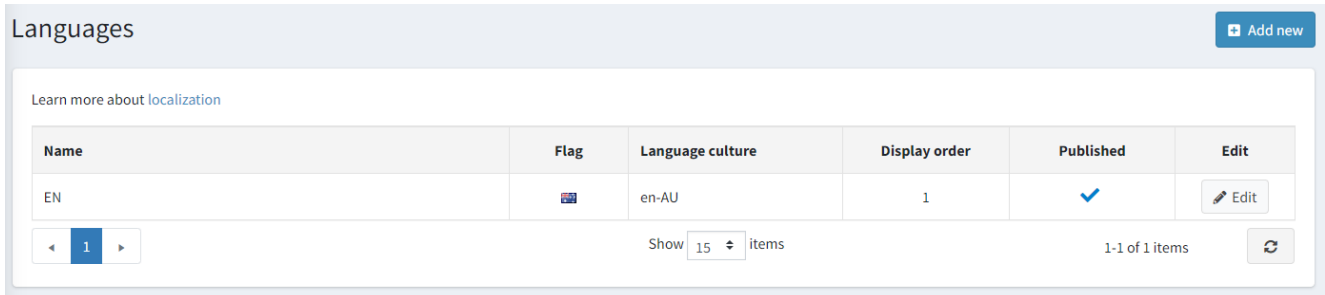

SalesSearchFromDays sets the number of days of history shown is the Sales View when the value is -7 then the last seven days of orders will be displayed by default. If the date fields are populated and then you display the set range of orders

DisplayGroupProductName determines if the Product Group name is displayed in report or only the associated product name. The default is to show the Group and Associated Product name.

SupportedStoreThemes is a list of Nop-Templates themes that are supported by the plugin. New themes can be supported by adding the appropriate view in \Views directory and adding the theme name to this list

Display of Time and Dates

The display of dates and times in the correct format is determined by the Language Settings.

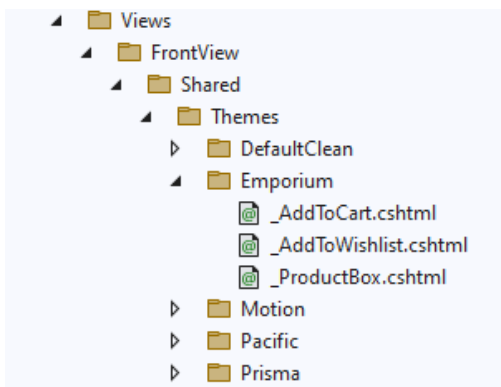

Supported Theme Files

If you are using nop-Templates themes the you can use the setting

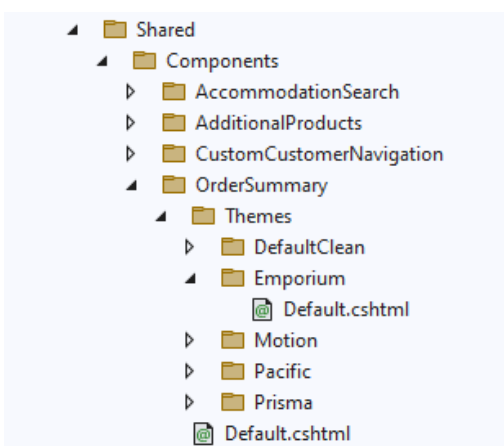

Use Nop Templates Ajax Cart

This setting will load alternate versions of the view files

The files The that are loaded are

- _AddToCart.cshtml
- _AddToWishList.cshtml
- _ProductBox.cshtml

The component files that are loaded are

- \OrderSummary\Default.cshtml

The themes that are currently supported are Motion,Emporium,Prisma and Pacific

Where other themes are used then the relative files need to be copied from the theme directory and customised in a similar way to the existing modified theme files

You also need to add the supported theme to the setting

apollosettings.supportedstorethemes
